

Pay-at-table PWA — live demo guide

Interactive walkthrough of the app as it works today: guest QR ordering, server floor, kitchen and bar KDS, cashier, and admin – all wired through one in-browser session on table 7.

September 23, 2026 · Screenshots + runnable demo package included

Start the demo

Run locally first

From the project root (or the extracted demo package): `npm run build && npm start` – or in `docs/demo-package/`: `./start-demo.sh`. Then open the links below. Default port:

8443

Prototype limitation

Guest, kitchen, bar, server, and admin only stay in sync while they share the same browser session. A second phone or tablet will not see live orders until a real backend ships.

Payments are simulated – no real charges.

All portals

Click **Open** after the demo server is running. Log in with the PINs in the table below.

La Terraza

Cocina costarricense de autor

Guest PWA

PHONE

Scan-style entry at table 7. Join the table, browse the menu, send rounds to kitchen/bar, split the bill, and pay (simulated).

Open guest

La Terraza

Cocina costarricense de autor

Staff login

PIN

Single sign-in for servers, kitchen, bar, cashier, and managers. Routes you to the right portal by role.

Escaneo QR verificado

Server floor

4821

Floor plan with live table 7 session. Seat guests, view cart, guardian queue, present bill, void items.

Open floor

La Terraza

Cocina costarricense de autor

Escaneo QR verificado

Kitchen KDS

2847

Food tickets from send-to-kitchen. Advance pending → preparing → ready → delivered. Device pairing on first use.

Open kitchen

Escaneo QR verificado

Bar KDS

9156

Drinks and bar items routed by menu category.
Same ticket flow as kitchen on a separate station.

Open bar

Escaneo QR verificado

Cashier & admin

5638 / 0000

Cashier POS for table 7 payments. Admin dashboard, menu builder, QR tables, reports, team, settings. Manager PIN unlocks portal switcher.

Cashier

Admin

Suggested 10-minute walkthrough

1

Guest joins table 7

Open guest link, enter a name, land on the menu.

2

Order food + drinks

Add a main and a cocktail.
Send to kitchen – items split to kitchen vs bar KDS.

3

Kitchen & bar bump

Log in as kitchen (2847) and bar (9156). Advance tickets through the flow.

4

Server view

Log in as server (4821). Open table 7 on the floor plan – see the live cart.

5

Guardian (optional)

Order alcohol or high-value items to trigger manager approval (PIN 0000).

6

Pay at table

Guest checkout – Apple Pay / card / split bill (simulated 1.8s delay).

7

Cashier

Cashier portal (5638) shows today's payments for table 7.

8

Admin

Manager (0000): portal switcher jumps between all UIs without re-login.

Manager shortcut

After logging in with PIN **0000**, use the colored **Portal Switcher** button (top-right on most screens) to jump Guest → Server → Kitchen → Bar → Cashier → Admin instantly.

Demo credentials

ROLE	NAME	PIN	OPENS
Manager	Luis Mora	0000	Admin + portal switcher + guardian overrides
Server	María García	4821	Floor plan, table details, shift closing
Server	Carlos Jiménez	7392	Floor plan (alternate server)
Kitchen	Roberto Solís	2847	Kitchen KDS (+ device setup on first visit)
Bartender	Ana Vargas	9156	Bar KDS
Cashier	Elena Castro	5638	Cashier POS

PINs are demo-only and stored in plaintext locally. Never use in production.

Files to send

Attach or zip these from the docs/ folder:

- `app-demo.html` – this guide (works offline; links need a running server)
- `demo-assets/` – portal screenshots referenced above
- `costa-rica-pat-demo.zip` – runnable demo (~550 KB): built app + local API + README

Recipient instructions

1. Unzip `costa-rica-pat-demo.zip`

2. Install Node.js 22+ if needed
3. Run `./start-demo.sh` (macOS/Linux) or `npm start` inside the folder
4. Open `app-demo.html` and click **Open guest (table 7)**

No public URL by default

This demo runs on the recipient's machine at `localhost:8443`. To demo over the internet temporarily, tunnel port 8443 (e.g. ngrok) and paste the HTTPS URL into the

Demo server URL

field at the top.

What works vs what is simulated

FEATURE	DEMO BEHAVIOR
Menu, cart, send-to-kitchen	Full flow on table 7; kitchen/bar ticket split by category
Guardian (alcohol / price / qty)	Approve or reject with manager PIN; reject rolls back sent lines
Split bill	Full, equal, or pay-my-items with FIFO settlement
Staff auth + KDS devices	Local API (<code>/api/v1</code>) with JSON file store; falls back to <code>localStorage</code> if server is down
Payments	Simulated – 1.8s delay, no PSP, no SINPE capture
Multi-device	Not supported – one browser tab is the whole restaurant
Hacienda invoices	UI fields only; not persisted or transmitted
Admin historic reports	Today is live; prior days use demo fixtures

For backend gaps and production roadmap, see [backend-readiness-review.html](#).
